

Buckets and Spades

Maps and Images

Important Facts

The main features of a seaside are: beach, sea, pier, cliffs, boats and a lighthouse.

Many years ago, seaside holidays were very different compared to now. People would cover their bodies up fully as they believed it was rude to show their skin.

In the past they had bathing machines which were rolled into the sea for people to get changed in.

8 million pieces of plastic find their way into our ocean daily.

Plastic is killing more than 1.1 million sea birds and animals every year.

Plastic takes over 400 years to decompose (break down) , it stays in the ocean causing damage for a very long time.

Much of the plastic is blown into rivers, streams and oceans from overflowing landfill sites and from the streets and parks where people litter.

Vocabulary / Key Terms

Pollution	The introduction of harmful materials into the environment.
Plastic	A synthetic material.
Ocean	A very large area of sea.
Climate Change	A change in climate patterns.
Features	An attribute or aspect of something.
