

Let's Grow!

Diagrams and Images

Important Facts

There are five stages to a plant life cycle, they are: the seed, germination, growth, reproduction, pollination.

A habitat is the natural environment of an animal, plant or other organism.

An organism is an individual plant or animal.

A food chain starts with a producer, this is an organism that makes its own food. Most food chains start with a green plant.

Animals care for their offspring by ensuring they have somewhere to live and food to eat.

Most living things must live in habitats that are suited to them and their needs.

Maps use a variety of symbols and have different meanings. The symbols represent real objects.

Vocabulary / Key Terms

Food chain	This shows how plants and animals get energy.
Habitats	The natural home or environment.
Offspring	A person or animal's young.
Growth	The process of increasing in size.
Herbivore	An animal that feeds on plants.
Carnivore	An animal that feeds on other animals.
Dispersal	Distributing or spreading things.
Pollination	The transfer of pollen.
Fieldwork	Practical work in the natural environment.
Germination	The development of a plant from a seed.
